University *of* NORTH ALABAMA

Spring 2025 Math Problem of the Week: Problem #13

Due noon Monday, April 21
Open to all UNA undergraduates

Directions: Deliver your written solution to me (Dr. Bryant) in CPTMTH 328 by noon Monday, March 21 or, if you cannot find me, you may leave it with Ms. Buckley in CPTMTH 377. All work must be your own. You are required to justify your response fully. If you utilize a well-known theorem, state the theorem's full name and proposition, showing that the conditions of the theorem are met. Good luck!

Problem #13: Let f be a function differentiable on $[0,1]$ such that $f(0) = 0$ and $f(1) = 1$, and $f(x) \in [0,1]$ for each $x \in [0,1]$. Prove that there exists $a, b \in [0,1]$ such that $a \neq b$ with $f'(a) \cdot f'(b) = 1$.
