University *of* NORTH ALABAMA

Spring 2026 Math Problem of the Week: Problem #13

Due noon Monday, April 20
Open to all UNA undergraduates

Directions: Deliver your written solution to me (Dr. Bryant) in CPTMTH 328 by noon Monday, April 20 or, if you cannot find me, you may leave it with Ms. Phifer in CPTMTH 377. All work must be your own. You are required to justify your response fully. If you utilize a well-known theorem, state the theorem's full name and proposition, showing that the conditions of the theorem are met. Good luck!

Problem #13: Consider the power series expansion of

$$\frac{1}{1-2x-x^2} = \sum_{n=0}^{\infty} a_n x^n$$

Prove that, for each integer $n \geq 0$, there is an integer m such that

$$a_n^2 + a_{n+1}^2 = a_m.$$
