University *of* NORTH ALABAMA

Spring 2026 Math Problem of the Week: Problem #8

Due noon Monday, March 9
Open to all UNA undergraduates

Directions: Deliver your written solution to me (Dr. Bryant) in CPTMTH 328 by noon Monday, March 9 or, if you cannot find me, you may leave it with Ms. Phifer in CPTMTH 377. All work must be your own. You are required to justify your response fully. If you utilize a well-known theorem, state the theorem's full name and proposition, showing that the conditions of the theorem are met. Good luck!

Problem #8: The points of 3-dimensional space $\mathbb{E}^3$ are colored with 5 colors (all 5 colors being used). Prove that there is a plane that contains points of at least four colors.
